

## **Specifications**

Name: 5G-CASH

Ticker: VGC

Type: PoW, PoS, Masternodes

Algorithm: X16Rv2

Block Time: 5 minutes

Mined Block Maturity: 20 blocks

Max Supply: 100,000,000 VGC

Masternode Collateral: 50,000 VGC

## **Ports**

P2P port: 22020

RPC port: 22019

## **Mining rewards**

Block reward : 3 VGC

Masternode reward: 45%  
(PoS) and (PoW) share 55%

## **Premined**

13,000,000 VGC to give people's coin back from old chain

## **Features**

Sigma Protocol  
Exodus Protocol  
TOR Protocol  
Dandelion++ Protocol  
Proof of Work (PoW) X16R-V2  
Proof-of-Stake (POS) 3.0  
Masternodes

## **What is 5G-Cash**

5G-CASH(VGC) is a hybrid project with a growing vision to become a payment gateway for the community with no inflation. It is also built on the basic protocol of Bitcoin and incorporates multiple improvements and additional technologies in the protocol to make it perfectly transparent and anonymous at the same time, secure, economical, and efficient for all the users. Our network is based on trust along with the features we provide being a hybrid network.

## **Why is 5G-CASH a Hybrid Network?**

Because it uses PoW but also incentivizes holders to mint their balances to protect the network against 51% attack with the new version of POSv3.0 to earn the same reward amount and once holders allocate the necessary coins they can run Masternodes to easily support the consensus validating and securing the Network.

## **What makes 5G-CASH different from another currency?**

Apart from its fair launch VGC has a fair chance of mining for everyone even with older GPUs. One of the new coming changes to the network is that miners will have the chance to mine VGC with CPUs and GPUs without the need to compete between them. VGC also prevents hungry miners from attacking the network making it hard to find a block every 5 minutes.
